

CYBERSIGHT™

SEE INTO THE HEART OF YOUR NETWORK WITH CYBERSIGHT™ FROM T-ASSET USA

CyberSight™ helps you manage your computer network better and it saves you money.

1. CyberSight™ gives you a full audit of your network: every piece of hardware (right down to the type of processor in each machine) and every bit of software; available to you on demand.
2. CyberSight™ monitors and reports what programs your network is running and where your people are going on the web, it monitors and reports on 20 different categories of threats to your security (from hacking tools to subversive language and pornography), it will even send you an e-mail when it finds any serious threat you want to be notified about.
3. CyberSight™ lets you set policies about security, about where people go on the web (you can block your computers from accessing any websites you designate), it allows you to block any programs you choose and it allows you to set policies about how the network and your computers are going to be used. With CyberSight™ you can monitor real-time activity on any computer in your network, you can remotely diagnose and repair computers and you can even log every keystroke on any machine that has CyberSight™ installed.
4. CyberSight™ gives you an important extra level of protection. By enabling its powerful and exclusive 'lockdown' or 'clean list' option, the only programs that will run are those you specifically designate. No executable, even a so-called 'day zero' threat, can run on a machine that is locked down by CyberSight™.

No one but CyberSight™ gives you as much information, as much control and as much security in one, low-cost package. CyberSight™ is undoubtedly the best value network management/security tool in the market today.
