

MAP LOG DISCREPANCY REPORT – GEOLYNX 4.5

GeoLynx has the ability to report possible ANI/ALI and GIS map data errors that appear within the 911 call process. These errors are reporting using the “Log Discrepancy Report”. To access the Log Discrepancy Report, simply place the cursor over the map screen and right click on the mouse. A tool listing will appear. The Log Discrepancy Report appears at the bottom of the display window as shown.

The user may determine the desired report by selecting either ANI / ALI Error Record or GIS / MAP Data Error Record.

ANI/ALI Report: Click “Get ALI” and the form will be automatically populated with the current ALI information. The user may then select and change the information in the Correct ALI information window. The user may also add any additional comments that may assist in correcting a possible error.

GIS / MAP Error Record: click on “Get Map” and the form will automatically display the map view in GeoLynx. The user may enter in additional information pertaining to the possible map error that will assist in correcting the error.

print a 21-7
