No community is immune from intentional attacks that could result in significant casualties. When an incident happens, providing timely and accurate information to the public is critical. Will your agency be ready?

EXERCISE OVERVIEW
Join us on April 2 for a functional exercise that will provide participating agencies an opportunity to engage in a Joint Information System (JIS) to coordinate and disseminate emergency messages during a complex, coordinated attack in a real-time, no-fault environment.

EXERCISE OBJECTIVES
1. Demonstrate the ability to establish a JIS or JIC (Joint Information Center) to support incident management, enhance the flow of communications, and coordinate messaging.
2. Validate the effectiveness of existing information sharing and messaging plans in response to a CCTA incident.
3. Develop coordinated public messaging for dissemination on traditional and social media platforms during and after response.

EXTENT OF PLAY AGREEMENTS (XPA)
If you are interested in participating in the exercise, please complete the XPA at the link below. Only one XPA per agency/organization is needed. Individual participants should also register using the registration link below. Participation in this exercise will be both virtual and in-person.

XPA Link Here.
