JOINT INFORMATION SYSTEM FUNCTIONAL EXERCISE

No community is immune from intentional attacks that could result in significant casualties. When an incident happens, providing timely and accurate information to the public is critical. Will your agency be ready?

EXERCISE OVERVIEW
This functional exercise will provide participating agencies an opportunity to engage in a Joint Information System (JIS) to coordinate and disseminate emergency messages during a complex, coordinated attack in a real-time, no-fault environment.

EXERCISE OBJECTIVES
1. Demonstrate the ability to establish a JIS or JIC (Joint Information Center) to support incident management, enhance the flow of information and coordinate messaging.
2. Validate the effectiveness of information sharing and messaging plans in response to a CCTA.
3. Coordinate the development and dissemination of public messaging through traditional and social media platforms throughout an incident.
