Within the redevelopment area, any land use change resulting in an increase in population or employment is defined as redevelopment or infill (refill) in the long-range forecast (www.marc.org/forecast). These people and jobs are the ones counted when calculating the percentage of regional growth accommodated by the refill of the existing urbanized area.

1990 urbanized area = 1990 Census tracts with a minimum of 1,000 population or employment per square mile, converted to 2010 Census blockgroups, plus 2010 blocks at least 30% developed in 1990, within 2010 urban areas.
