Chapter Eight: Future Airport Performance ............................................................ 8-1
Introduction.............................................................................................................. 8-1
Airport Reference Code (ARC) Objective............................................................... 8-1
Primary Runway Length Objectives................................................................. 8-3
Primary Runway Width Objectives................................................................. 8-5
Taxiway Objectives......................................................................................... 8-6
Primary Runway Pavement Condition Index (PCI) Objective ................. 8-7
Visual Navigational Aids (NAVAIDS) Objectives ...................................... 8-9
Runway Approach Objectives ........................................................................... 8-10
Lighting Objectives ....................................................................................... 8-12
Weather Reporting Capability Objectives .................................................... 8-13
Hangar Storage Objectives .............................................................................. 8-14
Aircraft Apron Objectives ............................................................................. 8-15
Terminal/Administration Building Objectives .............................................. 8-16
Auto Parking Objectives ............................................................................ 8-18
Ground Communication Objectives ............................................................. 8-19
Service Objectives ....................................................................................... 8-20
Summary of Facility and Service Objectives ............................................. 8-22

Chapter Nine: Costs and Implementation ...................................................... 9-1
Cost Estimating.................................................................................................... 9-1
Funding Eligibility.......................................................................................... 9-10
Additional Actions to Reach Framework Goals and Performance Measure Objectives 9-13
System Plan Implementation Tools................................................................. 9-16

Table of Figures

Figure 1-1 - Building Blocks of RASP .......................................................... 1-1
Figure 1-2 - RASP Study Area ........................................................................ 1-3
Figure 1-3 - Location of Study Airports .......................................................... 1-4
Figure 1-4 - Airports and Heliports in Nine-County Area ......................... 1-5
Figure 2-1 - Distribution of Based Aircraft by Type ..................................... 2-4
Figure 3-1 - 2015 Annual Operations ............................................................. 3-4
Figure 3-2 - Historical Annual Operations (NPIAS Study Airports Only) .......... 3-5
Figure 3-3 - Comparison of Study Area and National General Aviation Trends .................................................... 3-6
Figure 3-4 - MARC 2040 Population Forecast ........................................... 3-8
Figure 3-5 - General Aviation Worldwide Aircraft Shipments and Billings .... 3-11
Figure 3-6 - FAA Projection of Rate of Annual Growth for U.S. General Aviation Fleet 2013-2035 .......... 3-12
Figure 3-7 - Based Aircraft Projection Scenarios ........................................... 3-15
Figure 3-8 - Operations Projection Scenarios ............................................... 3-20
Figure 3-9 - 2035 Projected Annual General Aviation Operations .............. 3-22
Figure 3-10 - Designated Airspace Classes ..................................................... 3-24
Figure 5-1 - Airports with Property Identified for Aviation Use ...................... 5-4
Figure 5-2 - Airports with Property for Non-Aeronautical Use/Development ..... 5-5
